

COURTSIDE FILM SETUP CHECKLIST

Capture footage that is easier to break down.

A one-page setup pass before you press record. Nothing here depends on Trophy Labs - it makes any basketball film easier to review.

- ☐ Put the camera behind or diagonally beside the shooter
- ☐ Keep the player's full body in frame
- ☐ Include the hoop when possible
- ☐ Use a stable tripod or fixed surface
- ☐ Avoid shooting directly into bright lights
- ☐ Prefer a bright indoor court for the current V1
- ☐ Keep the ball visible at release and during flight
- ☐ Avoid frequent zooming or camera movement
- ☐ Record complete reps instead of stopping immediately after release
- ☐ Upload the original-quality file when practical
